Arden Windows & Doors are manufactured in the UK at our state of the art factory in Coventry.

All products are supplied Factory Finished and Fully Glazed. We supply on a National basis and offer a full sub-contract installation service into new build & replacement projects.

Products fully conform to current British Building Regulations & FENSA Standards.

Arden has an unrivalled capability to design and manufacture bespoke window solutions on a volume scale.

Our survey and design teams are specialists in finding sympathetic aesthetic solutions whilst also meeting modern thermal and security standards.

Where possible security & building regulation compliance is maintained however it must be noted that this is not always possible for bespoke solutions. This will be discussed during the design process.
